KPI Requirement

Total Vehicles:

- Understand the overall landscape of electric vehicles, encompassing both BEVs and PHEVs, to assess the market's size and growth.

Average Electric Range:

- Determine the average electric range of the electric vehicles in the dataset to gauge the technolog advancements and efficiency of the EVs.

Total BEV Vehicles and % of Total BEV Vehicles:

- Identify and analyze the total number of Battery Electric Vehicles (BEVs) in the dataset.
- Calculate the percentage of BEVs relative to the total number of electric vehicles, providing insights into the dominance of fully electric models.

Total PHEV Vehicles and % of Total PHEV Vehicles:

- Identify and analyze the total number of Plug-in Hybrid Electric Vehicles (PHEVs) in the dataset.
- Calculate the percentage of PHEVs relative to the total number of electric vehicles, offering insights the market share of plug-in hybrid models.

Chart Requirement

1. **Total Vehicles by Model Year (From 2010 Onwards):**
   a. Visualization: Line/ Area Chart
   b. Description: This chart will illustrate the distribution of electric vehicles over the years, starting from 2010, providing insights i the growth pattern and adoption trends.

2. Total Vehicles by State:

1. Visualization: Map Chart
2. Description: This chart will showcase the geographical distribution of electric vehicles across different states, allowing for the identification of regions with higher adoption rates.

3. Top 10 Total Vehicles by Make:

1. Visualization: Bar Chart
2. Description: Highlight the top 10 electric vehicle manufacturers based on the total number of vehicles, providing insights into th market dominance of specific brands.

4. Total Vehicles by CAFV Eligibility:

1. Visualization: Pie Chart or Donut Chart
2. Description: Illustrate the proportion of electric vehicles that are eligible for Clean Alternative Fuel Vehicle (CAFV) incentives, aid understanding the impact of incentives on vehicle adoption.
